

Ridgewood Veterans Wing St. John's New Brunswick

Ridgewood veterans wing in St. John's New Brunswick.

Ridgewood veteran wing is air-conditioned with four City Multi (VRF) systems.

Two way diffusion ceiling cassette units where used at Ridgewood Veterans Wing.

Ridgewood veterans wing in St. John's New Brunswick is one of the many Mitsubishi Electric City Multi installation sites in Canada.

Units were installed in the old and new section, four y-series condensing units, used in conjunction with 27 indoor units consisting of 2 way and 4 way diffusion ceiling cassettes and wall mounted ductless units were used. Design and installation was easy due to the flexibility that City Multi offers.

All systems are controlled from a MJ-103MTRA central network controller, each indoor unit also has a local controller to ensure that occupants are always as comfortable as possible.

Operation is whisper quiet, and the unique airflow pattern of the indoor units create comfortable room conditions while ensuring that cold air drafts do not blow directly on the occupants.

All units are controlled from a MJ-103MTRA central controller.
